

Pier1 - Business Overview

Sales relationship with traffic to the website

Points to note

What is on this TAB:

- 1) The top two graphs show the correlation of total traffic variation with the average and Total sales for Online and InStore Channels
- 2) The Heat map below shows the variation of the percentage of online sales for all weeks excluding the holiday period across the week. One key point to note is how online sales have grown over the one year data given to us

Key insights:

1. Instore
 - a) There is strong influence of daily traffic observed on daily sales when it comes to instore sales.
 - b) The Holiday dates of Christmas, Easter and Thanksgiving record a clear escalation in daily traffic above average by closely 45% giving on an average daily sales ranging above 98,038.
 - c) There is prominent decline observed in terms of average daily sales figures in February from 2016 to 2017 by 26%.
 - d) There is fairly marked rise in daily sales and corresponding daily traffic figures tending above average, as we approach the weekends starting from Friday until Sunday. From Sunday onwards, there is clear dip in both figures.
 - e) Saturday being the highest in terms of sales and traffic. This could be an ideal time to feature the products.
2. Online
 - a) There is fair relationship between daily traffic and daily sales figures with analogous behavior in terms of distribution.
 - b) In terms of online sales, the highest peaks are prevalent not only on the exact holiday but spread above and beyond it. For e.g. The Thanksgiving holiday falls on 24th Nov 2016 with online sale of 6540 and 36.9% above average traffic while the next 4 days record more daily sales corresponding to an average of 15300+ and 120% above average traffic.
 - c) The online daily sales continue to dip in month of February with 11% shrinkage observed from 2016 to 2017.
 - d) With reference to weekly performance, there is clear
